

HANNAH CLAY

+1 (843) 607-0573 | fowlerhg@gmail.com | Fuquay-Varina, NC, USA | linkedin.com/in/hannah-fowler21

PROFESSIONAL SUMMARY

iOS software engineer with 5+ years of experience building high-performance, data-driven applications. Strong background in C++, Swift, system design, and backend-integrated client architectures. Proven ability to deliver responsive, scalable features that handle complex data flows and real-time user interactions. Experienced in collaborating across product, design, and engineering teams to ship impactful user-facing features.

SKILLS

Languages & Frameworks: Swift, SwiftUI, UIKit, C++, Rust, Python, SQL, XML

Professional Skills: API Integration, Data Processing, Distributed Systems, Asynchronous Programming, Memory Optimization

Methodologies & Tools: Xcode, Agile (Scrum), Test-Driven Development (TDD), JIRA, Azure Devops, CI/CD, Git, Linux/Unix

PROFESSIONAL EXPERIENCE

The Boeing Company

June 2024 - January 2026

iOS Developer

Remote

- Built and optimized data-driven iOS features for an Electronic Flight Bag (EFB) application using Swift and SwiftUI.
- Developed highly responsive UI components that handled complex geospatial and real-time data, ensuring smooth performance under heavy data loads.
- Collaborated with backend and product teams to design and integrate APIs, enabling efficient data flow and low-latency user experiences.
- Diagnosed and resolved production issues using logging, crash reports, and performance profiling, improving app stability and reliability.
- Overhauled legacy logging infrastructure to improve readability, searchability, and runtime performance, accelerating root-cause analysis during debugging.

The Boeing Company

July 2021 - June 2024

Software Application Developer

Englewood, CO, USA

- Developed and maintained a high-performance multi-tenant geospatial mapping engine API using C++, Objective-C, and Swift.
- Spearheaded a strategic modernization initiative by identifying and rewriting a high-priority legacy tech debt library in Rust. Used to cache, retrieve, and render large-scale weather data, improving memory safety, data retrieval speed, and rendering performance.
- Collaborated with multi-tenant customers and internal teams building iOS and web applications that consumed the mapping and navigation APIs, ensuring scalability, reliability, and backward compatibility.
- Improved application consistency by managing an internal image regression comparison pipeline, effectively addressing bugs and feature changes, which elevated overall software quality.

Itron, Inc.

May 2020 - August 2020

System Design Engineer

West Union, SC, USA

- Engineered three custom C#/.NET desktop applications with SQL back-end API, enabling non-technical staff to execute complex database operations effortlessly.
- Spearheaded a legacy modernization initiative by proposing and initiating the transition from InfoPath to a custom in-house web development suite built with HTML, CSS, and JavaScript, improving cross-platform accessibility and UI/UX.

Itron, Inc.

August 2019 - December 2019

System Design Engineer

West Union, SC, USA

- Automated high-volume data entry by developing a C# utility to parse XML data and execute secure SQL inserts, streamlining data processing and reducing manual error.
- Optimized data integrity by implementing robust validation logic during the XML-to-SQL conversion process, ensuring clean data migration for critical business forms.

EDUCATION

University of Illinois - Urbana-Champaign

January 2022 - August 2023

Master's, Computer Science

GPA: 3.32

Clemson University

August 2017 - May 2021

Bachelor's, Computer Science

GPA: 3.55
